HEATED INSOLES

Thin and comfortable

#5310 & 5410

The premium choice of Your
Game Changing Technology

User Manual:

- Remove the original soles from your footwear if necessary – use them as a template for the cutline.
- Cut the insoles after the original sole – for optimal fit, cut a few millimeters under your cutline, but ONLY if they are placed on top of the existing sole.
- Put the heat insoles in the footwear.
- Connect the built-in 55 cm USB cable from the soles with your Nordic Heat 5V powerbank.
- Place the powerbank into the supplied leg strap or in your boot.
- If you prefer to have your powerbank in a pocket in your jacket, just connect it with the supplied 90 cm USB extension cable.
- The leg strap can with advantage, also be used as a belt strap.
- Can be used with all kinds of powerbank.

We recommend that it is a Powerbank with an “on/off” Powerfunction to prevent unnecessary tear and wear of the USB plugs.

Approximately heating time with Nordic Heat handwarmer/powerbank:

5000mAh:	4 hours
10000mAh:	7 hours

Pay special attention to:

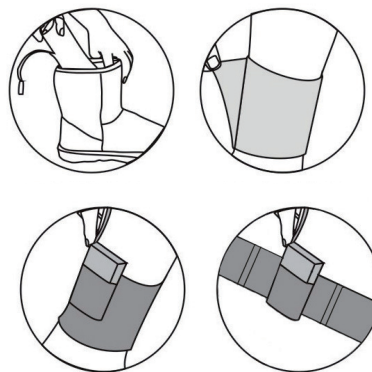

When taking your footwear on- and off, do not stretch/pull/stress the cables.

Do not put the soles under water, as this may damage the glue between the layers of the soles.

Cleaning:

Make a mild soap solution and brush the soles with a dishwasher brush. Leave for natural air drying.

Do not soak the soles.
